So I'm a chump who bought this game twice in the same day (though to be fair I like playing games in bed and it was cheaper on mobile). If that's not enough to tell you how good it is, then keep reading!

This is definitely one of the better CoGs in terms of quality, story, and choice.

The mystery and romance are fantastic, the characters are vivid, the horror is good, and I've played through 4 times and I'm just barely scratching the surface. I saw people talking on the CoG forums about a major character that I haven't even officially met yet. I only *just* managed to get my first mostly happy ending.

The only possible con that I can come up with is that it's a bit overwhelming at first. There are so many choices and they are all important. One little mis-step is all it takes and suddenly you're either restarting or playing a tragedy. I got a bit frustrated after the 2nd time this happened towards the end (this game is LONG, and like all CoGs there's no save function, so I had a lot of emotional investment going) and had to stop to take a break, but I came back later twice as determined and eager to see it to the bitter end.

I'm not even close to done with this game yet. It's a gothic romantic mystery full of eldritch horrors and if that sounds like a good time then you should check out the demo.. Dont bother getting it, the scenery is ugly and scarce, no custom assets for route builders to use, no new rolling stock or locomotives. Literally someone could just build this route without buying it, put it on the steam workshop and you could get it for free as all the assets are already in the game. A waste of money, shame the first british steam route in a long time is this lazy. Energizing.. An excellent mix of the metroidvania and rogue like genre.. 6 out of 10

A survival tower defence game that includes several unique gameplay features. You are encouraged to expand your base to gather resources, and engage in an endless struggle to balance economy with adequately positioned and upgraded defences.

Price Recommendation: \$5 AUD or less.. This is fun. Recommend!. thanks i camed and farded and shided pants. There are a lot of really bad Japanese visual novels on steam. This is one of a handful I actually enjoyed and would recommend. This is not a juvenile fanservice laden piece of poorly written fanfic like most visual novels but actually tells an interesting story about economics and contains some real character growth.

Now I just wish Sekai Project would stop releasing trash and focus on visual novels with actual stories. Apart from this and Fault Milestone their libery is a disgrace.. Great Game !. Mothership Zeta is definitely one of the best DLCs I've ever played on any game. if your character uses energy weapons, then you should buy this DLC. It was extremely fun, and I loved the stereotypical aliens.

At this new discounted price, sure, I would recommend it. It's mostly 10-12 hours of decent strategy, though, given the low resource feature of the game, they could have worked a little more on AI, game mechanics and in game depth. A good step up from old Lords of Midnight though.. Couldn't pick up items in VR, my friend had to solve most of the puzzles due to this bug. Nice Idea But A Part Of The Tutorial Didn't Work.. Great game and runs well with Oculus Touch. Bought a VR bundle specifically for this and was not disappointed. I'm only through the first 10 puzzles. They've been easy so far, but I see the complexity ramping now. Since this is a physics puzzler, there are a lot of different solutions for each one. It feels satisfying tweaking the different components to get a minimalist solution *just* right.. As old school reports used to say: "Jane could do better".

The idea is good but what do we have here. A product called "Dangerous Approaches". Yol would be forgiven for thinking it was about the landing experience but it is not. Before even getting to try a landing you have to either follow a majenta line for a couple of hours or put on the autopilot and go and have a good dinner until approach time comes. Not that the flights are all bad but sometimes people do not have two hours to spare to practice an approach and with the state of fsx at the moment there is only a 50% chance of lasting that long.

The voice overs have obviously been written to be listened to with engine and ambient noises off. No way to fly a plane.

I think it must also have been developed with Active Sky Next on Jane's computer as she mentions several times the weather and there is none...at least no buffetting and I have my weather slider full right. If Flybe was landing in the Scottish Islands I am sure the pilots could not handle the stillness as they are really used to wind.

Keep trying Jane as this time the bad outnumbers the good points but I am sure you can do better.
